### Message from the Guest Editors

Monitoring of food safety and assessment of food quality is a challenging. Smart solutions for the analysis of food quality and safety are then needed. In this area chemical sensors and biosensors can play a key role to provide rapid information with advantages in terms of cost, sensitivity, analysis time, amount of sample needed, reagents required and waste produced for the analysis.

This Special Issue will be devoted to new chemo- and bio-sensing strategies for the detection food contaminants and quality markers.

The submission of new and alternative devices/approaches using electrochemical/optical sensing, affinity/catalytic biosensors, sensor arrays in liquid or gas phase, nanomaterial/nanocomposite sensors directed to the evaluation of food quality and safety are, then, strongly encouraged.
