Supramolecular Chemical Sensors

Guest Editor:

Message from the Guest Editor

Prof. Dr. Sheshanath Bhosale RMIT University and Goa University

Deadline for manuscript submissions: closed (30 September 2018) The development of well-organized structures through non-covalent bonding, with possible applications in sensing, is of both scientific and technological interest. The applications of self-assembled sensor molecules with the capability of fluorescence, in combination with other analytical techniques for mapping total metal content, offer researchers the opportunity to address fundamental questions about the sensing of ions, explosives, and biological molecules, for example, glucose or RNA detection. Supramolecular Chemical Sensors permit to sense individual molecules, multicellular organisms, and cells encapsulated in 3D matrices. The rapid progress in sensor science in recent years has resulted in the development of self-assembled fluorescence probes with enhanced analytical capabilities. Because of the vast evolution in this research field, therefore, we have decided that it is timely to compose a Special Issue of *Chemosensors* focusing on the important role sensors play in "Supramolecular Chemical Sensors". You are invited to submit manuscripts illustrating the suitability of newlydeveloped sensors for fluorescent analysis applications, as well as manuscripts describing novel applications of established sensors in solving real-life analytical problems.

Message from the Editor-in-Chief

Chemosensors is an international, scientific, open access journal on the science and technology of chemical sensors published by MDPI. All articles are released on the internet immediately following acceptance. The journal publishes reviews, regular research papers, and communications. The scope of Chemosensors includes: New chemical sensors design Electrochemical devices, potentiometric sensor, redox electrode Optical chemical sensors Analytical methods Environmental monitoring Gas detectors electronic nose, etc.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q1 (*Instruments & Instrumentation*) / CiteScore - Q2 (*Analytical Chemistry*)
