### Message from the Guest Editors

Dear Colleagues,

We are inviting you to submit your manuscripts to this Special Issue of *Climate*: “Climate Change and Deforestation and Forest Degradation”. Forests and climate change interact with each other. On the one hand, climate change has impacted and will continue to impact forest ecosystems and forestry. On the other hand, forests and forestry can play an important role in sequestering and storing carbon to offset greenhouse gas emissions while adapting to a changing climate.

Research and review articles that involve multidisciplinary efforts or innovative approaches are especially encouraged. Articles targeting any forest types and regions are welcome.

Deadline for manuscript  
submissions:

**closed (30 September 2023)**
