Message from the Guest Editors

Dear Colleagues,

The thermodynamic aspects of coating preparation are specific and challenging issues for many reasons. In most coating depositions, the energy fluxes carried by the particles to the coating site are extremely high, and the process is extremely fast and takes place under a state of significant temperature rise and considerable thermodynamic imbalance. An important contribution to the targeted research of coating preparation is the thermodynamic aspect, especially with regard to the thermodynamics of thin, super-thin, hard, and super-hard layers. For this Special Issue, contributions will be welcome on both theoretical thermodynamics and experimental works dealing with the measurement of the temperature dependencies of coating formation.

Potential topics for this Special Issue are as follows:

- Research of the thermodynamic properties of layers (especially of thin, super-thin, hard, and super-hard layers);
- Research of enthalpy/entropy for different types of coatings;
- Research on tool coatings resistant to extreme temperatures;
- Measurement of the temperature dependencies of coating formation.

Special Issue

Message from the Editorial Board

Now more than ever, research is called for to produce technologies and improve knowledge to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed at the center of most contemporary research. Surface science and engineering play a key role in this regard. Refining surfaces and their modifications provides new materials, architectures and processes with a huge potential to aid most societal challenges. *Coatings* is a well-established, peer-reviewed, online journal that focuses on the dissemination of publications in the field of surface science and engineering. *Coatings* publishes original research articles that report cutting-edge results and review papers on the hottest topics.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Materials Science, Coatings & Films*) / CiteScore - Q2 (*Surfaces and Interfaces*)
