## Electrocatalyst Design for the Reduction of Carbon Dioxide

Guest Editor:

**Prof. Dr. Zhen Zhang**

State Key Laboratory of  
Solidification Processing, Center  
for Nano Energy Materials, School  
of Materials Science and  
Engineering, Northwestern  
Polytechnical University, Xi'an  
710072, China

Deadline for manuscript  
submissions:

**20 July 2024**

### Message from the Guest Editor

With the over-exploitation of fossil fuels, the atmospheric CO<sub>2</sub> concentration continuously rises, causing the global greenhouse effect and other environmental problems. Electrocatalytic CO<sub>2</sub> reduction reaction (CO<sub>2</sub>RR), which can cleanly obtain various hydrocarbons, is considered a potential solution. Fundamental understanding, rational design, and delicate manipulation of catalysts are the keys to achieving high-performance electrochemical CO<sub>2</sub> conversion. Catalysts with special spatial arrangement can exhibit high catalytic activity, and the advantageous morphology, suitable support, electronic structure, and chemical properties can further improve the performance of CO<sub>2</sub>RR. However, there are still many questions that need to be explored to reach general conclusions about superior activity, selectivity, and stability. Research is addressing fundamental questions, but industrial-level devices and systems are not out of reach. These are currently open questions and hot and timely topics. Scientists around the world are invited to contribute to this Special Issue of Crystals, which will facilitate the development of the CO<sub>2</sub> electrolysis field.

of Pisa, 56126 Pisa, PI, Italy

## Message from the Editor-in-Chief

Welcome to *Crystals*, the journal dedicated to the fascinating world of crystallographic research! Crystals are more than mere decorative elements; they hold the key to understanding the fundamental structure of matter. Our mission is to explore the crucial significance of this research across various fields. From medicine to technology, chemistry to geology, crystals play a vital role. Their structure provides insights into new advanced materials, innovative drugs, and groundbreaking technologies. Through *Crystals*, we delve into the microscopic world to discover solutions that will shape the future. Join us on a journey through the *Crystals*, where science merges with beauty and innovation.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [CAPus](#) / [SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Crystallography*) / CiteScore - Q2 (*Condensed Matter Physics*)
