Message from the Guest Editor

Dear Colleagues,

The distribution patterns of algae are constantly changing, and these distributions can have consequences on marine environments as they are impacted by climate changes. Several factors are affecting the patterns and responses of marine floras: Anthropogenic introductions, adaptability/plasticity of native species, natural dispersal capabilities, and the level of genetic variation in populations. Molecular methodologies have enhanced our understanding of species distribution and variation, and ecological studies have revealed the impacts of dispersal on local environments. Therefore, studies, at all scales, temporally and spatially, will aid in our understanding of these processes and may give us insight into the future of marine floras and their responses to climate impacts.

Message from the Editor-in-Chief

Diversity (ISSN 1424-2818) is a scholarly journal that covers all areas of diversity research. Our distinguished editorial board and refereeing process ensures the highest degree of scientific rigor for publishing. Original research articles and timely reviews are released online, with unlimited free access.

We invite papers and reviews on multidisciplinary topics of diversity that bridge organismic diversity (systematics, biodiversity, phylogeny, population genetics, and evolution) and molecular diversity (phytochemistry and biophysics).

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Biodiversity Conservation*) / CiteScore - Q2 (*Agricultural and Biological Sciences (miscellaneous)*)
