Message from the Guest Editors

Fuel cells are emerging as one of the most promising technologies for clean energy generation. Fuel cells are electrochemical devices converting chemical energy to electrical and thermal energy.

This Special Issue covers current trends and future developments in fuel cell technology. Theoretical, experimental, and analytical original research, as well as reviews articles, are welcome.

Deadline for manuscript
submissions:

31 October 2024

Keywords

- fuel cell
- performance
- durability
- catalyst
- energy conversion
- hydrogen
- electrochemical
