### Message from the Guest Editor

Electric Vehicles (EVs) can play an important role in meeting global goals in climate change due to CO<sub>2</sub> emissions. However, EVs cannot run alone. To fuel the EVs, EV-charging infrastructure is necessary. On the other hand, the EV-charging infrastructure is part of the larger sophisticated power grid system. To orchestrate the whole system for resource management, planning, security and ancillary services, information technology is a key component.
