### Message from the Guest Editors

In the last decade, research institutions all over the world have devoted an ever-growing effort to innovative energy conversion. This Special Issue aims to collect new research contributions on smart energy management, conversion, and control; this includes but is not limited to applications for power electronic converters, electrical motors, internal combustion engines, renewable energy sources, and fuel cells. Smart energy management, conversion, and control can be achieved in various ways, among which:

- Power electronics static energy conversion with switching loss minimization;
- Load curve management;
- Fuel consumption optimization;
- Electric machine loss minimization;
- Efficiency optimization in power flow management.
