Emission Control Technology in Internal Combustion Engines

Guest Editors:

Dr. Andrzej Ziółkowski

Faculty of Civil Engineering and
Transport, Poznan University of
Technology, Poznan, Poland

Prof. Dr. Paweł Fuć

Faculty of Civil Engineering and
Transport, Poznan University of
Technology, Poznan, Poland

Prof. Dr. Piotr Lijewski

Faculty of Civil Engineering and
Transport, Poznan University of
Technology, Poznan, Poland

Deadline for manuscript
submissions:

closed (5 March 2025)

Message from the Guest Editors

According to the data of World Health Organization, over 90% of the population worldwide is exposed to polluted air, which contributes to the death of 6 million people annually. The main pollutants are CO, CO₂, THC, particulate matter, methane and other derivatives generated as a result of combustion of fossil fuels. One of the anthropogenic sources of emissions are the exhaust gases of combustion engines used in vehicles and non-road equipment.

When analyzing and investigating the exhaust emissions from road transport one has to allow for the extensive range of vehicle types (passengers cars (PC), Heavy Duty Vehicles (HDV), Light Duty Vehicles (LDV), two-wheelers etc.) whose operating regimes and exhaust emissions vary widely. Many scientific investigations have been devoted to the impact of combustion engines on the human health. Extensive work on the improvements in internal combustion engines must continue and the results must be made widely available.

This Special Issue aims to present original research papers on the latest technological advances and strategic analyses on emission control technology in internal combustion engines.

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
