**Dr. Adrián Mota Babiloni**

ISTENER Research Group, Department of Mechanical Engineering and Construction, Universitat Jaume I, E12071 Castelló de la Plana, Spain

Deadline for manuscript submissions:

**closed (30 September 2019)**

### Message from the Guest Editors

Dear Colleagues,

Refrigeration applications, mostly based on vapour compression systems, represent a significant contribution to global climate change. While refrigeration is necessary for the appropriate development of humanity, it is predicted that an increase in the number of refrigeration applications will worsen the issue of climate change. Hence, energy efficient systems with a lower contribution to global warming are required. In the last years, the research and development of new working fluid, technologies, and methodologies have provided an opportunity for the transition from vapour compression systems based on fluorine fluids to more sustainable solutions.

Prof. Dr. Ciro Aprea

Prof. Dr. Angelo Maiorino

Dr. Adrián Mota Babiloni

## Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (*Engineering (miscellaneous)*)
