Estimation of Energy Consumption in Chemical Processes

Guest Editors:

Dr. Daniele Cespi

Researcher and consultant at
EMC Innovation Lab s.r.l., Viale
Italia 29, 47921 Rimini (RN), Italy

Prof. Dr. Fabrizio Passarini

Department of Industrial
Chemistry “Toso Montanari”,
Alma Mater Studiorum-University
of Bologna, 40136 Bologna, Italy

Message from the Guest Editors

The Special Issue focuses on the methodologies to evaluate the energy requirements in the synthesis of innovative chemicals at both laboratory and industrial scale. Energy data for synthesis are required to perform life cycle evaluation. A Life Cycle Assessment (LCA) approach is requested to identify direct and embodied burdens and assess the overall footprint. The procedure is far from easy: the identification of the energy flows involved in the chemical synthesis represents one of the hardest part of the LCA studies for many reasons.

Deadline for manuscript
submissions:

closed (28 February 2018)

Department of Mechanical and
Aerospace Engineering,
University of Roma Sapienza, Via
Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Engineering (miscellaneous)*)
