# Intelligent Wireless Power Transfer System and Its Application

Guest Editors:

# Prof. Dr. Mauro Feliziani

Department of Industrial and Information Engineering and Economics, University of L'Aquila, 67100 L'Aquila, Italy

#### Dr. Tommaso Campi

Department of Industrial and Information Engineering and Economics, University of L'Aquila, 67100 L'Aquila, Italy

### Dr. Silvano Cruciani

Department of Industrial and Information Engineering and Economics, University of L'Aquila, L'Aquila, Italy

Deadline for manuscript submissions: closed (31 January 2020)

# Message from the Guest Editors

WPT technology will be widely used in the future because it permits the transmission of electrical energy from a power source to an electrical load across an air gap without the use of wires. This makes WPT safer, cheaper and more comfortable than conventional wired methods. The vision for the future of power supply is the gradual replacement of wire links with wireless connections. WPT technology based on inductively coupled (resonant or non-resonant) coils is under investigation and development for a very wide range of applications in electric vehicles, drones, medical devices, consumer electronics, sensors, IoT, etc. This Special Issue is focused on algorithms, models, methods, technologies and applications that permit an improvement on the reliability and performance of intelligent WPT systems for fixed and mobile applications. Potential topics include, but are not limited to, intelligent techniques for automatic alignment of coils, re-tuning, smart compensation, range adaptation, multicoil design, soft switching, frequency selection, load matching, EMC and EMF safety issues.

Department of Mechanical and Aerospace Engineering, University of Roma Sapienza, Via Eudossiana 18, 00184 Roma, Italy

### Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

# **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Engineering (miscellaneous))
