# Hamiltonian Thermodynamics as a Unifying Theory of Dynamical and Phenomenological Methods

Guest Editors:

#### Dr. Stavros C. Farantos

Department of Chemistry, University of Crete, and Institute of Electronic Structure and Laser, Foundation for Research and Technology—Hellas, 700 13 Iraklion, Greece

#### **Prof. Dr. Stephen Wiggins**

School of Mathematics, University of Bristol, Bristol BS8 1TH, UK

Deadline for manuscript submissions: closed (31 March 2022)

#### **Message from the Guest Editors**

This is an important area of research if one considers that after more than a century of evolution of Hamiltonian theory, a modern geometrical (differential) description has been obtained, and important theorems and techniques for locating time invariant structures in phase space, i.e., constants of motion, have been found. Chemical reactions and spectroscopy have tremendously benefited from the application of these methods and the general investigation of the properties of highly excited molecules.

In the field of modeling multi-physics systems, a Hamiltonian theory named port-Hamiltonian systems theory has been developed with applications in mechanical, chemical, electromagnetic, hydraulic, and control domains. It is also worth mentioning the advances in quantum thermodynamics for modeling quantum mechanical systems-bath systems consistent with the principles of thermodynamics.

### Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

*Entropy* is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, PubMed, PMC, Astrophysics Data System, and other databases.

**Journal Rank:** JCR - Q2 (Physics, Multidisciplinary) / CiteScore - Q1 (Mathematical Physics)
