Authentication and Detection of Honey Adulteration

Guest Editor:

Prof. Dr. Michael G. Kontominas

Department of Chemistry, University of Ioannina, Ioannina, Greece

Deadline for manuscript submissions: closed (30 September 2019)

Message from the Guest Editor

Analytical methods to determine honey authenticity and to detect honey adulteration include chromatography, mass spectroscopy (MS), nuclear magnetic resonance (NMR), chromatography coupled to Isotope Ratio Mass Spectrometry (HPLC-IRMS), vibrational (near-infrared, midinfrared and Raman) spectroscopy, calorimetric methods (DSC), and Stable Carbon Isotope Ratio Analysis (SCIRA).

A thorough updated review of both standard and the most used as well as novel analytical methods for the analysis of honey will be presented in the proposed special issue making an effort to include the work of well established researchers working on the above subjects from around the world.

Message from the Editor-in-Chief

Foods (ISSN 2304-8158) is an open access and peer reviewed scientific journal that publishes original articles, critical reviews, case reports, and short communications on food science. Articles are released monthly online, with unlimited free access. Currently, Foods has been indexed by the Science Citation Index Expanded (SCIE - Web of Science), PubMed, and Scopus. Our aim is to encourage scientists, researchers, and other food professionals to publish their experimental and theoretical results as much detail as possible. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global food science community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, FSTA,

AGRIS, PubAg, and other databases.

Journal Rank: JCR - Q1 (*Food Science & Technology*) / CiteScore - Q1 (*Health Professions (miscellaneous)*)
