Biomass and Bioenergy from Forests: Challenges and Prospects for the Future

Guest Editors:

Dr. Giulio Sperandio

Dr. Andrea Acampora

Dr. Vincenzo Civitarese

Deadline for manuscript
submissions:

closed (15 December 2024)

Message from the Guest Editors

Biomass from forests and dedicated forest plantations represents a renewable source used in the production of thermal and electrical energy, as well as to produce timber for industrial use. From the point of view of energy production, it represents a valid alternative source to fossil fuels capable of producing energy in a more sustainable way and with a lower environmental impact. The biomass supply chain for energy is certainly more complex than the fossil fuel supply chains. The considerable variability of the raw material procurement conditions, linked both to the level of mechanization used in the various stages of the production process, and to the quality and quantity of product available, to market conditions and to price fluctuations, strongly affects the energy producible from forest biomass and the stability of its price. For this reason, all those production systems and models capable of optimizing the various production processes of the energy chain must be encouraged, providing solutions on the design, management and final transformation of biomass.

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)
