Message from the Guest Editor

Dear Colleagues,

Woody biomass derived from forest products is projected to become a progressively important component of the global bioenergy portfolio. An increase in the production of short-rotation woody crops is required to meet the targeted demand for woody biomass. Although much of the historical research on short-rotation forestry focused primarily on biomass production, recent research efforts have begun to investigate how maximizing forest production might positively or negatively impact other ecosystem processes. Such research efforts often rely on interdisciplinary approaches to understand the vegetation, air, soil, and water components of the system. In this Special Issue, we explore current research designed to assess the ecological benefits, costs, and consequences associated with using woody biomass for bioenergy.

Dr. Doug P. Aubrey

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (*Forestry*) / CiteScore - Q1 (*Forestry*)
