Data Mashups

Guest Editor:

Prof. Dr. Maged N. Kamel Boulos

Professor of Department of Digital Health Systems, Sun Yatsen University, Guangzhou 510000, China

Deadline for manuscript submissions:

closed (30 November 2009)

Message from the Guest Editor

The term 'mashup' refers to Web sites or services that weave data from different sources into a new data source or service. Mashups are becoming increasingly widespread, e.g., in the context of combining geographic and geotagged data about health-related issues or some disease and displaying such integrated data on Web maps.

Editor-in-Chief

Prof. Dr. Gianluigi Ferrari

Department of Engineering and Architecture, University of Parma, Parco Area delle Scienze, 181/A, 43124 Parma, Italy

Message from the Editor-in-Chief

Future Internet is a fast-growing journal devoted to rapid publications of the latest results in the general areas of computer networking/communications and information systems, with a focus on the Internet of Things, big data and augmented intelligence, smart systems (in terms of technologies, architectures, and applications), network virtualization, edge/fog computing, and cybersecurity. Both theoretical and experimental papers are welcome. Every year, Future Internet also features Special Issues dedicated to specific topics within the journal's scope.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Ei Compendex, dblp, Inspec, and other databases.

Journal Rank: CiteScore - Q1 (Computer Networks and Communications)
