Message from the Guest Editors

Dear Colleagues,

Evolving communication paradigms such as mobile ad hoc, mesh, and sensor networks as well as peer-to-peer applications demand for novel security solutions. Due to the changed characteristics compared to today's networks, these systems are beyond the protection of (most of) today's security mechanisms. New approaches that are able to handle the challenging conditions have to be developed. In this process, the mutual influence of security and quality of service/experience has to be considered as an integral element. This way, coexistence of security and performance can be achieved in order to further catalyze the evolution.

Ralf Steinmetz

Message from the Editor-in-Chief

Future Internet is a fast-growing journal devoted to rapid publications of the latest results in the general areas of computer networking/communications and information systems, with a focus on the Internet of Things, big data and augmented intelligence, smart systems (in terms of technologies, architectures, and applications), network virtualization, edge/fog computing, and cybersecurity. Both theoretical and experimental papers are welcome. Every year, *Future Internet* also features Special Issues dedicated to specific topics within the journal's scope.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Ei Compendex, dblp, Inspec, and other databases.

Journal Rank: CiteScore - Q1 (*Computer Networks and Communications*)
