Message from the Guest Editors

Dear Colleagues,

The recent launch of the Imaging X-ray Polarimetry Explorer has ushered in a new era of high-energy astrophysics. High-energy polarization is the latest window into the universe that was opened in December 2021, promising to revolutionize our understanding of the cosmos. Indeed, these past two years have seen remarkable new discoveries, affirmed or revised our understanding of the high-energy processes, and settled decades-old debates. The purpose of this Special Issue is to summarize our current understanding of the X-ray polarization signatures from astrophysical objects and highlight the achievements to date of the IXPE mission. We also chart the way forward with IXPE operating as a community instrument and with the launch of new X-ray polarimetry missions.

Message from the Editorial Board

Galaxies provides an advanced forum for studies related to astronomy, astrophysics, and cosmology, including all of their subfields. Different formats, such as specialized research articles, reviews, communications and technical notes are welcomed. Manuscripts containing original and creative research proposals and ideas are especially appreciated.

We encourage scientists to publish their astronomical observations and theoretical results in as much detail as possible. There is no restriction on the paper length and full experimental and methodological details, as applicable, should be provided. All papers will be peer reviewed promptly. On behalf of the distinguished members of the editorial board, I extend my welcome to all researchers working on these subjects to contribute to *Galaxies*.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Astrophysics Data System, INSPIRE, Inspec, and other databases.

Journal Rank: CiteScore - Q2 (*Astronomy and Astrophysics*)
