Message from the Guest Editor

Dear Colleagues,

GRBs are the most panchromatic and explosive phenomena in the Universe. After 50 years, still many theoretical models are challenged when they are compared to the variety of observational properties. We seek to better understand how theoretical models can be predictive of the observations, of the observational correlations and how we can possibly use GRBs as cosmological standard candles together with other probes. The investigation of these topics in the era of multimessenger astronomy aims to further enhance our understanding of these spectacular and still mysterious events.

Message from the Editorial Board

Galaxies provides an advanced forum for studies related to astronomy, astrophysics, and cosmology, including all of their subfields. Different formats, such as specialized research articles, reviews, communications and technical notes are welcomed. Manuscripts containing original and creative research proposals and ideas are especially appreciated.

We encourage scientists to publish their astronomical observations and theoretical results in as much detail as possible. There is no restriction on the paper length and full experimental and methodological details, as applicable, should be provided. All papers will be peer reviewed promptly. On behalf of the distinguished members of the editorial board, I extend my welcome to all researchers working on these subjects to contribute to *Galaxies*.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Astrophysics Data System, INSPIRE, Inspec, and other databases.

Journal Rank: CiteScore - Q2 (*Astronomy and Astrophysics*)
