Deadline for manuscript submissions:

closed (31 January 2019)

Message from the Guest Editors

Dear Colleagues,

PacBio's single molecule, real-time (SMRT) sequencing technology offers important advantages over the shortread DNA sequencing technologies that currently dominate the market. This includes exceptionally long read lengths (20 kb or more), unparalleled consensus accuracy, and the ability to sequence native, non-amplified DNA molecules. From microbes to vertebrates, long reads are now used to create highly accurate de novo genome assemblies, characterize complex structural variations, permit fulllength RNA isoform sequencing, and directly phase variants. The high accuracy further enables low frequency mutation detection and clonal evolution determination. Besides reducing biases, sequencing native DNA also direct measurement the of DNA base modifications. Therefore, SMRT sequencing has become an attractive technology in many fields, such as agriculture, basic science, and medical research.

This Special Issue is a collection of articles showcasing the latest developments and the breadth of applications enabled by SMRT sequencing technology.

Editor-in-Chief

Prof. Dr. Selvarangan Ponnazhagan

Department of Pathology, The University of Alabama at Birmingham, 1825 University Blvd, SHEL 814, Birmingham, AL 35294-2182, USA

Message from the Editor-in-Chief

Genes are central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fastmoving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised.

Why not consider *Genes* for your next genetics paper?

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank: JCR - Q2 (*Genetics & Heredity*) / CiteScore - Q2 (*Genetics*)
