Message from the Guest Editors

Dear Colleagues,

Hematological disorders constitute a daily challenge for clinicians providing care in the fields of anesthesiology and critical care. Hematological problems are common in patients scheduled for surgery or hospitalized in the intensive care unit (ICU), span wide range of disorders, and present with diagnostic and management difficulties. The unresolved issues regarding the diagnosis and management of various coagulopathies in anesthesiology and critical care patients deserve further research in the field. Timely etiologic classification and optimal management of hematological diseases constitute foundation of patient blood management programs, the benefits of which are particularly seen in the pre-surgical setting and in the ICU. All these factors underline the importance of devoting a Special Issue to the topic of hematologic challenges in anesthesiology and critical care. We warmly invite researchers in the field to contribute to this Special Issue of Healthcare.
