### Message from the Guest Editors

Dear Colleagues,

During the last few years, geophysical survey has developed considerably in terms of instrumentation, data processing and visualization methods, and also image processing and fusion techniques. Together with remote sensing and GIS, it is becoming increasingly integrated into archaeological investigations as the best solution, swiftly applicable, efficient, low cost and within non-destructive techniques (NDTs). This Special Issue aims to highlight the most recent advances of geophysics applied to Archaeology and Cultural Heritage Preservation worldwide, bearing in mind the geographical constraints of the regions, and the significance, diversity, and number of ancient monuments. I would like to invite you to submit articles about your recent works, experimental research, or case studies, with respect to the above and/or the following topics:

- Archaeological Prospections
- Geophysics applied to Archaeology
- Remote Sensing and GIS in Archaeology and Cultural Heritage
