Message from the Guest Editors

Dear Colleagues,

The role of public health is to protect population health and generate evidence to inform health interventions, supports, and policies. Public health decision-making applies evidence from a broad range of disciplines and relies on research evidence, expertise, and information about the local context to inform decision-making at various system levels.

Public health decision-making can occur at the policy level (e.g., actions taken by a government or health system) or at more local levels (e.g., actions taken by health care professionals to support specific population groups), depending on the situation at hand. We welcome papers which focus on decision-making in public health at both the systems level and at more localised levels. This may include articles which consider contextual, social, and psychological influences upon individual decision-making regarding public health and social care such as the uptake of services or adherence to public health recommendations. They may also include the decision-making that occurs at a team level among health and social care professionals (HSCPs) who are in charge of translating public health policy to practice.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
