Deadline for manuscript
submissions:
closed (31 October 2021)

Message from the Guest Editor

"Healthy environment, health for all. Unhealthy environment, diseases for all" is an axiom by now accepted by all. The microbial world exerts a strong influence on binomial environmenta-health, because microorganisms represent an essential part and an intrinsic component of the environment. The relationship between the individual and the various environmental factors can be expressed in different states of wellbeing or illness. The environment can indirectly or directly affect health. It can promote the circulation of pathogens and other biological factors. It can also act through non-biological factors, such as the presence of chemical and physical contaminants.

In recent decades, diseases with microbial etiology have regained vigorous and danger due, above all, to the appearance and rapid spread of bacterial strains with chemo-antibiotic multi-resistance. To prevent the feared morbidity and mortality rates forecast for 2050, it is necessary to actively promote and implement a series of experimental microbiological investigations for the isolation and study of bacterial strains from Clinical specimens, Environment and Food.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
