Message from the Guest Editors

Dear Colleagues,

Over the past decade, China has implemented wide-ranging health system reforms and invested heavily in population health. Despite progress in expanding access, there are signs that substantial challenges remain in terms of increasing the quality and equity of health services. There are persisting concerns of low-quality medical care, particularly in rural areas and urban migrant communities. It is also unclear whether current public health services are sufficient to address evolving disease burdens affecting vulnerable populations such as young children and the elderly.

Recent initiatives have begun to address these challenges, yet the high quality empirical research needed to guide policy design and implementation is lacking. In this special issue, we invite researchers in public health, epidemiology, health economics and other social sciences to submit high quality empirical papers related to the issues in this important research area.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
