Message from the Guest Editors

Type 2 diabetes (T2D) and its complications are the leading causes of death in most countries. It has negative impacts on individuals, families and healthcare systems. In 2021, the International Diabetes Federation (IDF) estimated that, globally, 537 million adults aged 20 to 79 lived with diabetes. This figure is expected to rise to 783 million by 2045. It is estimated that 94% of the increase in the number of people living with diabetes will occur in low- and middle-income countries, where population growth is expected to be greater. This Special Issue seeks to explore differences in incidence, prevalence, mortality, premature mortality, morbidity, risk factor exposure and protective factors (individual, environmental and contextual) of T2D across regions, countries and at the subnational level. The papers resulting from this Special Issue may help to better understand the burden of T2D worldwide, and to identify gaps between countries, to help target public policy, adequately assign resources and implement measures for prevention. We welcome those works that explore the burden of this disease from different points of view, both health and economic and social.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
