Message from the Guest Editors

Nowadays, there is growing concern about cyber-aggression among adolescents and its (personal, family, and social) consequences, especially in this particularly vulnerable age group. Families, schools, healthcare professionals, and social workers are all trying to understand and find responses to this problem. Despite the recent advances in this field, the mechanisms by which cyber-aggression in adolescents can have significant negative effects on those involved have not been sufficiently researched. The early research in this regard nevertheless suggests that it is not only the victims, but also the aggressors and witnesses, and even their families, who may suffer the negative consequences of this dreadful experience.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
