Message from the Guest Editor

Dear Colleagues,

The ubiquitous presence of food cues in our modern environment is believed to contribute to the rising trends in overconsumption and associated obesity observed over the last few decades. This has led to the rapid development of literature aiming to assess how the food or nutrition environment (the places where we purchase or consume food) promote healthy or unhealthy eating. Despite these developments, much remains to be done to better measure our food environments, how they influence specific purchasing and eating patterns across the life course, and who is more likely to be influenced by environmental food cues. From a methodological perspective, more experimental and prospective evidence for these relationships are needed to better inform the development of future interventions and policies.

This Special Issue is open to any subject area related to the impacts of environmental food cue exposure on food behaviour.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
