Message from the Guest Editors

Environmental sustainability (ES) has emerged as a key area in organizations. Specifically, in the contemporary business environment, ES is becoming a strategic imperative for a wide array of types and sizes of organizations. The increasing customer demand for ecofriendly products, the rising expectation for corporate social responsibility, and stiffening environmental regulations are the key drivers for organizations to undertake ES initiatives. Manufacturing industries have adopted green practices by using recycled materials, reducing emissions, conducting energy audits, promoting green technology innovation, and developing green supply chains and production management. ES is a complex and far-reaching process. Some firms pursue sustainability to improve their practices, whereas others do it to match their competitors' moves. Most firms are likely to focus on certain ES practices but neglect other sustainability activities. Several researchers have examined the relationship between ES and manufacturing performance but have come up with mixed or inconclusive results.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
