Message from the Guest Editor

Dear Colleagues,

Sedentary behaviour has recently emerged as a new focus of research, which is, not only due to modern life, in which sitting has become the dominant posture of most activities, but also because of its associations with different health indicators. In addition, sedentary behaviour is prevalent in all age groups going from (young) children to adolescents, adults and older adults, and it is present in many settings such as the home, the school, the office or passive transportation. As sedentary behaviour is such a recent research topic, several aspects can still be thoroughly investigated. Therefore, manuscripts on following topics (though not limited to them) are welcome to be submitted:

- Factors influencing sedentary behaviour
- Interventions targeting sedentary behaviour
- Various settings (e.g., childcare, school, home, office, retirement home, transport, etc.)
- Measurement of sedentary behaviour
- The role of peers, family, teachers, members of the community, etc.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
