submissions:

31 July 2024

Message from the Guest Editor

Dear Colleagues,

The role of the tumor microenvironment for cancer initiation and propagation cannot be overemphasized. Normoxia is a state with normal oxygen levels of 20–21% in tissues; however, normal organ tissue oxygen concentrations away from the lung are usually much lower, and the term physoxia with a 5% oxygen level reflects this discordance. Hypoxia favors glycolysis with its end products ultimately leading to a lowering of pH and the promotion of tumorigenesis. Furthermore, hypoxia increases an established tumor's potential to become metastatic. In contrast, hyperoxia creates a tumor microenvironment that supports the body's immune system defense against cancer; however, the associated inflammation can cause 'protumor inflammation' mediated by IL-1 β and is associated with local tissue damage.

This Special Issue of *IJMS*, 'The Role of Hypoxia, Normoxia and Hyperoxia in Cancer Initiation and Propagation', led by Dr. Mary M. Salvatore, aims to engage the scientific community in a conversation about oxygen concentration and its effect on cancer.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
