Message from the Guest Editors

Dear Colleagues,

When in their natural habitat, microorganisms synthesize a large number of compounds that allow them to regulate the number of both the producer strains themselves and other representatives of microbial communities. Antimicrobial agents include antibiotics, proteolytic enzymes complexes, compounds that disrupt the sense of quorum in the microbial population, and a variety of other examples. The ability of microbial strains to synthesize antimicrobial agents is widely deployed in biotechnology to obtain antibiotics, combat phytopathogens and restore the health of biocenoses.

The list of microorganisms capable of synthesizing antimicrobial agents is steadily increasing. The most promising in terms of the synthesis of antimicrobial agents are fungi, actinomycetes, bacilli, and lysobacters. It seems likely that research will enable both the obtention of new and effective strains for the production of antibiotic compounds and the development of effective technologies for the production of antimicrobial agents, as well as methods for their use to reduce the chemical load on the environment.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
