Message from the Guest Editors

Dear Colleagues,

Adipose tissue is a complex organ and in this last years it has received great attention thanks to its high stem cell content: Adipose Stem Cells (ASC).

Ideally, a stem cell for regenerative medicinal applications should meet the following set of criteria: (i) it should be found in abundant quantities (millions to billions of cells); (ii) it can be collected and harvested by a minimally invasive procedure; (iii) it can be differentiated along multiple cell lineage pathways in a reproducible manner; (iv) it can be safely and effectively transplanted to either an autologous or allogeneic host.

The aim of the present special issue is

- 1) characterisation of physiology of ASC
- 2) characterisation of secretoma activity of ASC
- 3) defining on of transcriptional and non-transcriptional events related to their commitment
- 4) application of ASC as tool to test novel

an Open Access Journal by MDPI

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
