Deadline for manuscript
submissions:

closed (28 February 2022)

Message from the Guest Editor

Dear Colleagues,

Exosomes are the smallest cell-released vesicles with the potential to transfer proteins, lipids, metabolites, small RNAs, messenger RNAs, or DNA between several cells exposed to different microenvironments via extracellular fluid, lymph, and bloodstream.

Exosomes have emerged as a new type of therapeutic and diagnostic (theranostic) tool in the noninvasive assessment of tissue response to stress, injury, surgery, drugs, foods or rehabilitation, and in the development of reliable organ-protective intensive therapy.

This Special Issue will discuss the recent advances in the field of exosomes as endogenous mediators of physiological and pathological conditions, focusing on the potential use of these nanovesicles as biomarkers or therapeutic agents.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
