Hospital, Tongji University,
Shanghai, China

Deadline for manuscript
submissions:

closed (31 December 2018)

Message from the Guest Editors

Dear Colleagues

G protein-coupled receptors (GPCRs) are expressed by various types of cells and recognize an array of various stimuli from both hosts and environments. These receptors modulate the key pathways in various systems and participate in many different cellular processes, which are involved in regulation of human diseases. Thus, GPCRs are potential therapeutic targets for a range of diseases.

The research topics in this Special Issue focus on the roles of GPCRs in various diseases, both in human patients and in experimental disease models. The scope of these topics include, but are not limited to, the mechanisms underlying GPCR signaling in regulation of pathogenesis of diseases; GPCRs and their downstream signaling pathways in disease; modulation of diseases by GPCRs; and host responses to potential therapeutic strategies targeting GPCRs.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
