Message from the Guest Editor

Dear Colleagues,

The evolutionary ancient family of insulin peptides encompasses a relatively large number of hormones of which better-known representatives in vertebrates are insulin and IGF-1/2. Apart from the well-documented actions of insulin in energy balance and of IGFs as tissue remodelers, many aspects of the strikingly wide array of actions of insulin/IGFs, and their impact in physiology and disease, are under constant re-appraisal.

This Special Issue will focus on evolutionary aspects and context-dependent actions of insulin peptides in health and disease, as new functions arisen along evolution, together with contextual nuances (cell/tissue type, developmental stage, health and disease), demand an updating/revisiting of the field.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
