The Interplay between Metabolism and Cancer and the Adipose Tissue Communication Signals

Guest Editors:

Prof. Dr. Pietro Formisano

Department of Translational Medical Sciences, University of Naples Federico II, 80131 Naples, Italy

Dr. Lucia Csaderova

Department of Tumor Biology, Institue of Virology, Biomedical Research Center of the Slovak Academy of Sciences, Bratislava, Slovakia

Dr. Eliska Svastova

Department of Tumor Biology, Institue of Virology, Biomedical Research Center of the Slovak Academy of Sciences, Bratislava, Slovakia

Deadline for manuscript submissions: closed (31 March 2021)

Message from the Guest Editors

Dear Colleagues,

A growing body of evidence points out to Metabolism and Cancer as tightly inter-related events. First, environmental cues should be considered. Indeed, environmental modifications may deeply affect cancer development and progression, by either impinging on initial phases of cellular transformation or changing cell trajectories toward aggressiveness. On the other end, metabolic perturbations are growing causes of disease. Based on the peculiar immune-metabolic features, the adipose tissue is a prime suspect for its active part in cancer and "metabolic" comorbidities. An important challenge will be to decipher the signals of the bi-directional communication between cancer and adipose tissue, being the latter one of the main component at the cancer site.

1. How macro- and micro-environmental modifications may contribute to cancer development and to adipose signals;

2. How cancer cell metabolism is relevant for cancer cell fate and outcome;

3. How cancer cells affect metabolic features of surrounding cells and overall metabolism;

4. How cancer cells and adipose tissue exchange information and communications.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences, Sez-Biochimica, Faculty of Medicine, Università Politecnica delle Marche, Via Ranieri 65, 60100 Ancona, Italy

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
