Message from the Guest Editor

Roboethics (Robot Ethics) is a branch of applied ethics and technoethics (technology ethics) of great value for modern human society. It studies the ethical problems that arise with the design, operation, control, and use of mental (intelligent, cognitive, autonomous) robots in real life. These problems have to be faced by scientists/engineers, operators/programmers, and end users in their own consequences. Overall, roboethics investigates how moral and ethical principles and theories can be (and must be) employed to resolve the complicated and crucial ethical issues/dilemmas encountered in practice when autonomous or semiautonomous robots are put at work. At the philosophical and theoretical level roboethics informs ethics via the development of potentially new ethical theories emergent from the field of robotics. The aim of this Special Issue is to publish high-quality research papers of both theoretical and practical nature.

an Open Access Journal by MDPI

Editor-in-Chief

Message from the Editor-in-Chief

The concept of *Information* is to disseminate scientific results achieved via experiments and theoretical results in depth. It is very important to enable researchers and practitioners to learn new technology and findings that enable development in the applied field.

Information is an online open access journal of information science and technology, data, knowledge and communication. It publishes reviews, regular research papers and short communications. We invite high quality work, and our review and publication processing is very efficient.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [ESCI \(Web of Science\)](#), [Ei Compindex](#), [dblp](#), and [other databases](#).

Journal Rank: JCR - Q2 (Computer Science, Information Systems) / CiteScore - Q2 (Information Systems)
