

Rational Design of Pharmacologically Active Metal-Based Compounds

Guest Editors:

Prof. Dr. Irena Kostova

Department of Chemistry,
Faculty of Pharmacy, Medical
University, 2 Dunav St., Sofia
1000, Bulgaria

Prof. Dr. Luciano Saso

Faculty of Pharmacy and
Medicine, Sapienza University of
Rome, 00185 Rome, Italy

Deadline for manuscript
submissions:

31 August 2024

Message from the Guest Editors

Metal-based biomolecules are involved in vital biochemical processes, being the active sites of metalloproteins, metalloenzymes, metal-containing and metal-binding drugs with a remarkable structural diversity and potential therapeutic and diagnostic applications. In recent years, the unique properties of metal-based compounds have tended to offer advantages in the discovery and development of new drugs. Much attention has focused on designing new structures with the desired composition and properties, e.g., coordination complexes, supramolecular structures as well as advanced nanomaterials with improved pharmacological properties and a broader range of activity.

This Special Issue focuses on recent advances in this multidisciplinary field with an emphasis on rational design, theoretical, analytical and physicochemical drug discovery strategies, related to biologically relevant applications. Original research articles, short communications and reviews highlighting the latest advances in the field will be considered for publication.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Inorganic chemistry remains a lynchpin of modern chemistry, not only embracing the function and reactivity of combinations of most elements of the periodic table, but also providing a footing for studies of materials, catalysts, drugs, fuels and industrial chemicals. Arguably, the role and reach of inorganics in society have never been as great as today. Adventurous research at the heart and at the extremes of inorganic chemistry is vital to further advances and *Inorganics* offers authors the opportunity to publish exciting new research in an open access format.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Chemistry, Inorganic & Nuclear*) / CiteScore - Q2 (*Inorganic Chemistry*)
