Message from the Guest Editors

Dear Colleagues,

The fall armyworm, an invasive pest from the Americas, is rapidly spreading through the Old World. It has a wide range of hosts and catastrophic destructive capability—it has about 353 host species, remarkably corn, with 15–73% of the yield loss of corn caused by its higher-instar larva. In this Special Issue we review the most up-to-date research developed for the biology, ecology and control of this pest.

Message from the Editor-in-Chief

Arthropods are a diverse and abundant group of animals that are important to a variety of research dictates. For example, hexapods act as bio-indicators of ecosystem function and pest status and serve as model systems for questions concerning physiology, embryology, genetics, and social interaction. The editorial board and staff at *Insects* is committed to providing contributors an open access forum to showcase objective and innovative research as well as succinct review articles. Our journal is dedicated to providing timely and thorough review of qualified submissions and we welcome you to submit a contribution.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, GEOBASE, PubAg, and other databases.

Journal Rank: JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)
