### Message from the Guest Editor

Dear Colleagues,

The recent discoveries on autophagy have highlighted its key role in tumorigenesis, cancer progression and morbidity. Autophagy, acting as a catabolic process, is a double-edged sword in cell survival and its impairment is responsible for cellular alterations, which in turn lead to tumorigenesis.

This Special Issue will collect research articles and reviews focusing on the mechanism of autophagy and its involvement in cancer. Recent advances are highly appreciated for submission. Nonetheless, basic, translational, and clinical research studies will be considered for publication in this issue.
