Message from the Guest Editor

Dear Colleagues,

In the last ten years, the use of calcium phosphate materials has drastically increased. They have been chemically modified (Ca/P ratio, doping, *etc.*), physically modified (pore size, pore structure, *etc.*), and many other. Many studies included *in vivo* and or *in vivo* experiments.

In the present Special Issue, we propose to edit articles that present those modifications and their application in the dentistry, orthopedic, vaccination, bacteriology, immunology, *etc.*
