

## Hydrogen Storage: Materials, Methods and Perspectives

Guest Editor:

### Prof. Dr. Tomasz Czujko

Institute of Materials Science and Engineering, Faculty of Advanced Technologies and Chemistry, Military University of Technology, Gen. S. Kaliskiego 2, 00-908 Warsaw, Poland

Deadline for manuscript submissions:

**closed (30 September 2021)**

### Message from the Guest Editor

The hydrogen economy is an ecological alternative to the conventional energy industry based on fossil fuels. One of its key elements is an efficient and economical hydrogen storage system. Hydrogen storage in the form of compressed gas and hydrogen storage materials in solid state are two dynamically developing research areas aimed at creating an effective hydrogen storage system. Scientists around the world are intensively working on the development of new and cheap high-strength materials for the production of high-pressure (30–70MPa) hydrogen storage tanks. A similar effort is being made to develop solid-state hydrogen storage materials, in the form of both hydrides and non-hydride hydrogen storage materials. In the last decade, there have also been a number of scientific works dedicated to prototype hydrogen storage systems, modeling their efficiency and experimental verification of the expected goals. Equally important problems are the validation of existing technological and material solutions and the indication of further prospective development directions in the area of hydrogen storage methods.

an Open Access Journal by MDPI

## Editors-in-Chief

### Prof. Dr. Maryam Tabrizian

1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada

2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

### Prof. Dr. Yuguang Ma

State Key Laboratory of Luminescent Materials and Devices, South China University of Technology, Guangzhou 510640, China

## Message from the Editorial Board

*Materials* (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

**Journal Rank:** JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Condensed Matter Physics)
