Artificial Intelligence Techniques Applications on Power Systems

Guest Editor:

Prof. Dr. Stavros D. Kaminaris

Department of Electrical and Electronics Engineering, Faculty of Engineering, University of West Attica, Athens-Egaleo, Greece

Deadline for manuscript submissions: **31 May 2024**

Message from the Guest Editor

A continuous, reliable, and definitive supply of electricity is essential in today's modern and advanced society. Power systems are showing a continual increasing trend throughout geographical regions with the addition of assets and the introduction of new technologies for the generation, transmission, and distribution of electricity. Moreover, modern power systems operate close to their limits due to ever-increasing energy consumption and the extension of extant electrical transmission networks and lines. Since the early-mid-1980s, most research in power system analysis has turned to the less rigorous and less tedious techniques of artificial intelligence (AI). Consequently, AI techniques have become popular for solving different problems in power systems: economic load dispatch, load forecasting, optimization of generation and scheduling, transmission capacity and optimal power flow, real and reactive power limits of generators, bus voltages and transformer taps, load demand in interconnected large power systems and their protections, etc. The application of these techniques in solving several power system problems can overcome the drawbacks of traditional solutions.

Editor-in-Chief

Prof. Dr. Francisco Chiclana

School of Computer Science and Informatics, De Montfort University, The Gateway, Leicester LE1 9BH, UK

Message from the Editor-in-Chief

The journal *Mathematics* publishes high-quality, refereed papers that treat both pure and applied mathematics. The iournal highlights articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, statistics, finance, computer science, engineering sociology. particularly those that and stress analytical/algebraic aspects and novel problems and their solutions. One of the missions of the journal is to serve mathematicians and scientists through the prompt publication of significant advances in any branch of science and technology, and to provide a forum for the discussion of new scientific developments.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), RePEc, and other databases. **Journal Rank:** JCR - Q1 (*Mathematics*) / CiteScore - Q1 (*General Mathematics*)
