# Shedding New Light on Membrane Technologies for Environmental Science and Engineering

Guest Editors:

#### Prof. Dr. Raghava R. Kommalapati

Center for Energy and Environmental Sustainability & Department of Civil and Environmental Engineering, Prairie View A&M University, Prairie View, TX 77446, USA

#### Dr. Hongbo Du

Center for Energy and Environmental Sustainability, Prairie View A&M University, Prairie View, TX 77446, USA

Deadline for manuscript submissions: closed (30 June 2022)

#### **Message from the Guest Editors**

Membranes are a core technology for separating one or some species from material mixtures, such as wastewater. saline water, and mixed gases, and offer significant advantages over other separation technologies. Membrane separation has become a generic technology for solving some big challenges that we are facing, such as natural resource and environmental problems. New areas of the applications of membrane-related technologies are being explored in pharmaceuticals, chemicals, and sustainable power/fuel production. This Special Issue promotes new light on membrane technologies and advances highquality research by publishing articles in Environmental Science and Engineering. It will focus on developing new membranes and the use of membrane materials as a direct, effective, and sustainable way to address environmental problems. We accept full-length research papers and review articles that improve our understanding of membrane mechanisms, broaden the membrane issues. applications to solve ecological and alleviate/eliminate hazard risks to our Earth.

#### Message from the Editor-in-Chief

You are cordially invited to contribute a research article or a comprehensive review for consideration and publication in *Membranes* (ISSN 2077-0375).

*Membranes* is an international, peer-reviewed open accessjournal of membrane technology published monthly online by MDPI. The journal covers the broad aspects of the science and technology of both biological and nonbiological membranes, including membrane dynamics and the preparation and characterization of membranes and their applications in water, environment, energy, and food industries. Articles contributing to better understanding of transport processes in all types of membranes are also welcome. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Polymer Science*) / CiteScore - Q2 (*Chemical Engineering* (*miscellaneous*))
