# **Arc-based Additive Manufacturing**

Guest Editor:

## Prof. Dr. Peter Mayr

Chemnitz University of Technology, Head of Institute of Joining and Assembly Reichenhainer Strasse 70, D-09126, Chemnitz, Germany

Deadline for manuscript submissions: closed (30 June 2019)

### Message from the Guest Editor

Over the past few years, additive manufacturing has gained enormous attention in terms of research, and also from industry. Metallic structures, especially beam-based processes, have been extensively investigated and validated, machinery has been developed, and in many cases implemented in industrial production.

On the other hand, a large variety of arc-based processes has been used for decades to join and generate structures of various metals. Under the rise of additive manufacturing, several newly-named processes, based on arc welding such as Wire+Arc Additive Manufacturing (WAAM) or 3D Plasma-Metal-Deposition (3DPMD), have been introduced.

This Special Issue of *Metals* is devoted to the science of all arc-based additive manufacturing processes and their generated structures. These shall include wire-, strip- and powder-based variants and include topics such as design strategies, manufacturing-related issues, metallurgical details, tailored microstructures, functionally-graded structures or the investigation of properties of AM structures.

### **Editors-in-Chief**

#### Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

#### Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

### **Message from the Editorial Board**

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure - disciplines in metallurgical field the ranging from processing. and mechanical behavior. phase transitions microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases. **Journal Rank:** JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)
