Deadline for manuscript  
submissions:

**31 August 2025**

### Message from the Guest Editor

To address the needs of the market in different areas, such as the aerospace and car manufacturing industries, it is very important and essential to be able to develop and also process various lightweight alloys and materials (e.g., Al alloys, Ti alloys, etc.). In this regard, powder metallurgy processes play a special role. The fabrication of powders using different metallurgical techniques is an area of considerable interest. Another area of interest is utilizing powder metallurgy, which could be considered a green technology, to manufacture the needed parts. These processes (e.g., press and sintering, cold isostatic pressing, hot isostatic pressing, etc.) have some advantages as compared to conventional techniques, making them attractive in the current market circumstances. The potential to make net-shape parts, reducing material loss, is one of these major advantages. The aim of this Special Issue is to advance our knowledge of the wide range of powder metallurgy routes and processes that could lead to the production of lightweight powders as well as engineering parts.

## Editors-in-Chief

### **Prof. Dr. Hugo F. Lopez**

Department of Materials Science  
and Engineering, College of  
Engineering & Applied Science,  
University of Wisconsin-  
Milwaukee, 3200 N. Cramer  
Street, Milwaukee, WI 53211, USA

### **Prof. Dr. Yong Zhang**

Beijing Advanced Innovation  
Center of Materials Genome  
Engineering, State Key  
Laboratory for Advanced Metals  
and Materials, University of  
Science and Technology Beijing,  
30 Xueyuan Road, Beijing 100083,  
China

## Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)
