Message from the Guest Editors

Dear Colleagues,

Nowadays, metals represent one of the fundamental pillars of social progress, as well as the material basis of national economic development. During the fabrication of these metal components, residual stresses are inevitably generated, which have a great influence on the structural integrity and service performance of the products. Whether involving traditional welding/joining/forming technology or newly developed additive manufacturing technology, residual stress has always been a key factor affecting the reliability of mechanical structures. Fatigue is the main failure mode of mechanical components and structures. Many observations of structural failure have shown that the location of fatigue failure is closely related to the distribution and magnitude of residual stress. Therefore, the investigation of residual stress, fatigue and the relationship between them is of great significance to ensure the long life and safe operation of metal structures.

The goal of the present Special Issue is to examine the recent contributions in the field of residual stress and fatigue of metals.

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.
Journal Rank: JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q1 (*Metals and Alloys*)
